

Pre-Finisher®

Semi-custom Finishing Appliance

Efficient finishing for aligner cases.

The Pre-Finisher appliance is a semi-custom solution perfect for improving the occlusion in aligner and fixed-appliance patients. When used as an adjunct to aligner treatment, they can reduce or eliminate additional trays required for case refinement – while correcting the posterior open bite often seen with aligner patients.

Nothing could be easier! Near the end of treatment, take a simple measurement and select a Pre-Finisher appliance from your in-office inventory kit – no impressions required. You'll appreciate the time-savings and the final results.

- No laboratory wait or fees; immediate delivery to the patient
- Relates teeth in both arches simultaneously; corrects open bite
- Aligns, rotates and closes spaces
- Sized in one-millimeter increments for precise fitting
- Optional seating springs facilitate placement and retention
- Ideal solution for the already-compliant aligner patient
- Results in 2-3 weeks

Real results

The Refine® Orthodontic Finishing Appliance is also available as a customized solution specially developed for aligner treatment.
